## NT 5.5/300 PI

**BALFOR conveyor belts** are the most robust and heaviest on the market. Built to last and to reduce maintenance and spare parts to a minimum. Thanks to the modularity of the frame and PVC belt, it is possible to vary their length and repair them at low cost in case of damage to the PVC belt. The paddles are made of metal to maximize durability over time. Balfor conveyor belts are absolutely the most robust on the market. The modular structure ensures the frame is resistant to any stress; the metal paddles completely eliminate belt wear; furthermore, the modular belt allows replacing only the damaged element when necessary. The possibility of pallet packaging guarantees very low shipping costs.
